

SceneIQ Tax Incentive Intelligence Platform

Comprehensive Project Strengthening Task List

Phase 1 — Critical Risk Remediation (Immediate)

Security & Access Control

Remove Public Credential Exposure

- ☐ Remove all usernames/passwords from README
- ☐ Create secure local development onboarding guide
- ☐ Create demo environment access procedure
- ☐ Rotate any credentials that may have been publicly exposed
- ☐ Verify no credentials exist elsewhere in repository history

Secrets Management

- ☐ Audit all environment variables
- ☐ Verify secrets are not hardcoded anywhere in application
- ☐ Implement secret rotation policy
- ☐ Document secret management procedures
- ☐ Create emergency credential revocation process

Authentication & Authorization

- ☐ Document JWT authentication flow
 - ☐ Define session expiration policies
 - ☐ Define password policies
 - ☐ Implement role-based access control (RBAC)
 - ☐ Create permission matrix documentation
-

Phase 2 — Enterprise Security Foundation

Security Documentation

Platform Security Overview

- ☐ Create Security Overview document
- ☐ Document encryption standards
- ☐ Document TLS requirements

- ☐ Document infrastructure security controls
- ☐ Document application security controls

Data Protection

- ☐ Define data retention policy
- ☐ Define data deletion policy
- ☐ Define backup retention policy
- ☐ Document data recovery procedures
- ☐ Create customer data handling policy

Infrastructure Security

- ☐ Document Railway security architecture
- ☐ Document database protection controls
- ☐ Document API security controls
- ☐ Document network security architecture
- ☐ Document container security standards

Compliance Readiness

- ☐ Evaluate SOC 2 readiness requirements
 - ☐ Create compliance roadmap
 - ☐ Identify regulatory obligations
 - ☐ Create security incident response plan
 - ☐ Create vulnerability management process
-

Phase 3 — Product Positioning & Strategy

Product Definition

Clarify Product Identity

- ☐ Define primary product category
- ☐ Create positioning statement
- ☐ Define core value proposition
- ☐ Define target customer profiles
- ☐ Define ideal customer segments

Product Messaging

- ☐ Reevaluate "Tax Incentive Compliance Platform" branding
- ☐ Evaluate "Production Incentive Intelligence Platform" positioning
- ☐ Create messaging hierarchy
- ☐ Define primary workflow story
- ☐ Define differentiation against competitors

Strategic Differentiators

- ☐ Elevate schedule-to-incentive workflow documentation
 - ☐ Document jurisdiction qualification intelligence
 - ☐ Document stacking engine advantages
 - ☐ Create workflow diagrams showing end-to-end value
-

Phase 4 — AI Governance & Explainability

AI Architecture Documentation

Define AI Boundaries

- ☐ Document what AI does
- ☐ Document what AI does NOT do
- ☐ Separate deterministic calculations from AI recommendations
- ☐ Document AI confidence limitations
- ☐ Create AI disclaimer language

Rules Engine Documentation

- ☐ Document incentive calculation engine
- ☐ Document qualification logic
- ☐ Document stacking logic
- ☐ Document calculation methodology
- ☐ Document auditability of calculations

AI Failover

- ☐ Define AI outage behavior
 - ☐ Create degraded-service workflows
 - ☐ Ensure calculations function without AI
 - ☐ Create fallback user messaging
-

Phase 5 — User Management & Governance

Role-Based Access Control

User Roles

- ☐ Define Administrator role
- ☐ Define Compliance Manager role
- ☐ Define Producer role

- ☐ Define Coordinator role
- ☐ Define Read-Only role

Permissions Matrix

- ☐ Create feature access matrix
 - ☐ Create API permission matrix
 - ☐ Create admin permission matrix
 - ☐ Document role inheritance
 - ☐ Document privilege escalation process
-

Phase 6 — Audit & Compliance Infrastructure

Audit Logging

Activity Tracking

- ☐ Log user logins
- ☐ Log rule approvals
- ☐ Log rule rejections
- ☐ Log incentive calculations
- ☐ Log jurisdiction changes
- ☐ Log production modifications
- ☐ Log administrative actions

Audit Reporting

- ☐ Create audit log viewer
 - ☐ Create audit export capability
 - ☐ Create compliance reporting tools
 - ☐ Define audit retention periods
-

Phase 7 — Multi-Tenant Architecture Review

Tenant Isolation

Current State Assessment

- ☐ Document current tenant model
- ☐ Assess customer data isolation
- ☐ Review access boundaries
- ☐ Review database partitioning strategy

Future SaaS Readiness

- ☐ Define tenant architecture roadmap
 - ☐ Define organization ownership model
 - ☐ Define workspace model
 - ☐ Define customer provisioning workflow
-

Phase 8 — Architecture Documentation

Technical Architecture

System Diagrams

- ☐ Create platform architecture diagram
- ☐ Create infrastructure diagram
- ☐ Create deployment diagram
- ☐ Create API architecture diagram
- ☐ Create AI integration diagram

Application Architecture

- ☐ Document frontend architecture
- ☐ Document backend architecture
- ☐ Document service boundaries
- ☐ Document module interactions
- ☐ Document dependency flow

Database Documentation

- ☐ Create ERD
 - ☐ Document key entities
 - ☐ Document relationships
 - ☐ Document indexing strategy
 - ☐ Document migration process
-

Phase 9 — Testing & Quality Assurance

Testing Framework

Backend Testing

- ☐ Implement unit tests
- ☐ Implement integration tests

- ☐ Implement API tests
- ☐ Define coverage targets

Frontend Testing

- ☐ Implement component tests
- ☐ Implement workflow tests
- ☐ Implement accessibility tests
- ☐ Implement regression tests

End-to-End Testing

- ☐ Test production creation workflow
- ☐ Test incentive calculation workflow
- ☐ Test schedule import workflow
- ☐ Test AI Advisor workflow
- ☐ Test rule approval workflow

CI/CD Quality Gates

- ☐ Require passing tests before deployment
 - ☐ Add automated linting
 - ☐ Add type checking
 - ☐ Add dependency scanning
-

Phase 10 — Monitoring & Observability

Platform Monitoring

Application Monitoring

- ☐ Implement error tracking
- ☐ Implement performance monitoring
- ☐ Implement API monitoring
- ☐ Implement database monitoring

Operational Monitoring

- ☐ Configure uptime monitoring
- ☐ Configure alerting
- ☐ Create incident response playbooks
- ☐ Create service health dashboard

Logging

- ☐ Centralize logs

- ☐ Define log retention policy
 - ☐ Create searchable log system
 - ☐ Create operational dashboards
-

Phase 11 — Production Readiness

Reliability

Backup & Recovery

- ☐ Create backup strategy
- ☐ Create recovery procedures
- ☐ Test disaster recovery process
- ☐ Define RPO objectives
- ☐ Define RTO objectives

Scalability

- ☐ Review database scalability
 - ☐ Review API scalability
 - ☐ Review AI request scaling
 - ☐ Conduct load testing
-

Phase 12 — Product Documentation

Customer Documentation

User Guides

- ☐ Create administrator guide
- ☐ Create compliance manager guide
- ☐ Create producer guide
- ☐ Create onboarding guide

API Documentation

- ☐ Expand endpoint documentation
- ☐ Add API examples
- ☐ Add authentication examples
- ☐ Add error response documentation

Methodology Documentation

- ☐ Explain qualification methodology
 - ☐ Explain stacking methodology
 - ☐ Explain jurisdiction evaluation process
 - ☐ Explain rule verification process
-

Phase 13 — Feature Rationalization

Module Review

Evaluate Product Scope

- ☐ Review Production Scheduling module
- ☐ Review Transmission Log module
- ☐ Review AI Advisor module
- ☐ Review Rule Review module
- ☐ Review Georgia workspace

Platform Cohesion

- ☐ Define module relationships
 - ☐ Remove redundant functionality
 - ☐ Improve navigation consistency
 - ☐ Define long-term platform roadmap
-

Phase 14 — Commercial SaaS Readiness

Customer Operations

Customer Success Infrastructure

- ☐ Define onboarding workflow
- ☐ Define support workflow
- ☐ Create support documentation
- ☐ Create escalation procedures

Pricing & Packaging

- ☐ Define subscription tiers
- ☐ Define usage limits
- ☐ Define enterprise package
- ☐ Define AI usage policies

Enterprise Sales Readiness

- [] Create security questionnaire responses
 - [] Create enterprise FAQ
 - [] Create architecture overview deck
 - [] Create compliance overview deck
-

Recommended Execution Order

Tier 1 (Critical)

1. Remove public credentials
2. Security documentation
3. RBAC implementation
4. AI governance documentation
5. Audit logging

Tier 2 (Enterprise Foundation)

1. Architecture documentation
2. Testing framework
3. Monitoring and alerting
4. Backup and recovery
5. Multi-tenant assessment

Tier 3 (Commercial Readiness)

1. Product positioning refinement
2. Customer documentation
3. Pricing strategy
4. Enterprise sales materials

Tier 4 (Scale)

1. Performance optimization
 2. Scalability testing
 3. Compliance certification roadmap
 4. Advanced observability
-

Success Criteria

The platform should ultimately be able to demonstrate:

- Secure multi-user operation
- Auditable compliance workflows
- Explainable incentive calculations
- Clear separation of AI and deterministic logic
- Enterprise-grade governance
- Reliable production operations
- Scalable SaaS architecture
- Clear market positioning

At completion, the platform would move from an estimated **6.5/10 commercial SaaS readiness** to approximately **9/10 enterprise SaaS readiness**, while preserving the strong domain expertise and workflow intelligence that already appear to be its most valuable competitive advantages.
